EDUCATION

The University of Texas at Austin – Austin, TX

Master of Science in Mechanical Engineering

May 2027

Bachelor of Science in Mechanical Engineering

May 2026

EXPERIENCE

Biotex, Inc. – Houston, TX

May 2026 - Present

Mechanical Engineering Intern

- Designed a custom Delrin testing fixture in SolidWorks for the Oncomagnetics brain cancer therapy system, applying DFM, ASME Y14.5 GD&T, and material selection to enable sterilization, magnetic compatibility, and repeatable cell culture testing.
- Engineered 5 custom assembly fixtures in SolidWorks for the Oncomagnetics motor module, applying DFM/DFA and worst-case tolerance stack-ups to reduce assembly time from 5 to 1.5 minutes per unit (70% reduction) and support in-house production of 400+ units.
- Developed ASME Y14.5 manufacturing drawings and inspection plans for production components, defining critical-to-function features and GD&T requirements to improve manufacturability and ensure consistent production quality.

Texas Robotics – Austin, TX

Dec 2025 – Present

Research Assistant

- Engineered precision test fixtures for an advanced lower-limb exoskeleton, enabling high-fidelity human kinematic data capture to inform clinical validation and iterative design
- Designed and 3D-printed carbon fiber load-bearing components meeting a strict 200 Nm/Rad impedance boundary, reducing structural failure risk under dynamic loading conditions and accelerating prototype-to-test cycle

General Motors – Warren, MI

May 2025 – Aug 2025

Service Release Engineering Intern (Chassis, Body Exterior)

- Delivered \$700K+ in cost savings by identifying part commonality across 2023-2025 Equinox/Terrain platforms, enabling BOM simplification and long-term manufacturing alignment across a high-volume vehicle program
- Conducted structural and serviceability analyses in HyperWorks Altair across multiple vehicle lines, synthesizing findings into actionable design recommendations adopted by cross-functional engineering teams
- Partnered with product and supply chain stakeholders to rationalize duplicate components, directly supporting GM's platform consolidation strategy and reducing service lifecycle complexity

Longhorn Racing Solar – Austin, TX

Aug 2024 – Aug 2025

Powertrain Engineer

- Designed battery cooling manifolds in SolidWorks and ran ANSYS Fluent thermal simulations, achieving 25% improvement in temperature uniformity and 35% reduction in pressure drop under race conditions

Parker Wellbore – Houston, TX

May 2024 – Aug 2024

Technical Services Intern

- Designed a specialized crane basket to safely transport heavy BOP stacks on Parker Wellbore rigs, building 3D models and technical drawings in SolidWorks and Autodesk Mechanical
- Performed FEA (linear static, modal, fatigue) per API, ASME, and AISC standards to determine FOS and WLL; selected materials via Charpy V-notch testing, achieving a 65% reduction in Von-Mises stress fluctuation under impact loading

LEADERSHIP AND COMMUNITY INVOLVEMENT

First-Year Experience (UT Austin) – Austin, TX

May 2024 – Jan 2025

First-Year Interest Group (FIG) Mentor

- Mentored and led a cohort of 20+ students, executing academic development programs and increasing first-year engagement and retention metrics

American Society of Mechanical Engineers (Purdue) – West Lafayette, IN

Oct 2022 – May 2023

Treasurer

- Managed \$20K+ in funds, secured external sponsorships, and provided financial oversight for engineering competitions and initiatives

ADDITIONAL

- Technical /Computer Skills:** MATLAB, Python, LabView, SolidWorks, Autodesk Fusion 360, AutoCAD Mechanical, ANSYS (Fluent, Mechanical), Teamcenter, DFSS Green Belt, GD&T, DFM, DFA, Manufacturing
- Honors:** Richard Douglas and Judith Watson Perkins Endowed Presidential Scholar
